

# THE ART OF VALVE REPAIR

At Marsh Rail Car Services, we believe that our customers don't buy our valve repair services. They want us to help keep their tank cars operational. Customers want what's in the tank cars delivered safely and reliably. When you do business with Marsh you are PROMISED a repaired valve, but you are GUARANTEED just that outcome.

All tested and certified repaired valves, are "not created equal". With up to 68 points of inspection and testing, Marsh exceeds industry standards for that of even new valves. This quality inspection process allows Marsh the confidence to offer a 2 year workmanship warranty and ensures our customers with safe and reliable valve performance throughout its service interval.

With a more challenging regulatory environment upon us, Marsh is developing processes designed to deliver complete traceability. These processes will ensure we meet or exceed regulatory requirements by tracking all replacement components throughout our entire valve repair effort.

The challenges associated with our client's maintenance compliance "bubble" magnifies the importance of valve turnaround. Marsh differentiates ourselves by offering programs designed to deliver the highest level of valve repair quality with a guaranteed turnaround time. Think of us not as just a valve repair organization, but a highly-skilled, trained, efficient, and cost-effective "manpower solution". A resource committed to your maintenance regime objectives, at a time of workload peaks and spikes. Save the costs associated with hiring, training, parts inventories, quality assurance, and increasing administrative compliance.

Our 40+ years of experience affords our technicians the ability to analyze a particular valve component and apply the knowledge as to what is required to ensure safe and reliable operation of the valve. We recondition to like-new standards, replace only the necessary components, saving you time and money while ensuring safe and reliable valve operation through its next service interval. Companies like GATX, American Railcar Leasing (ARL), and Occidental Chemical Corporation are among our long-time clients. They realize why at Marsh Rail Car Services, Inc. we consider tank car valve repair an "art form".
